# What is Automatic Reader?

Software-art Automatic Reader is simple text to voice convertor type software. It read your document or text as audio format and you can also save your document or text's audio file. It is fast, nice out looking, easy user interface and also support most of windows OS.

## **System requirement:**

Windows operating system (Windows 7 or 8 recommended)

Ram: 40MB, CPU: 300MHZ Free space: 10MB

Microsoft .net framework 4

# Home Screen

Home Screen of “Automatic reader .10” shows some rectangle Read, Settings, About with icon. If you click read icon open the reader which read your document or text, Settings is the application settings, About is the developer contribution of this software.

# Read window

In Read window you write your text or paste text from file or load your text document file. In screenshot we see some button play, pause, stop, record.

- >> When we play button on the reader read your text.
- >> Pause button pause the reading.
- >> Stop button stop the reading process.
- >> And record button record the whole document into voice and save to a wav file.

**Note:** you must press stop button after finishing your reading task. Then you can proceed another task. You can undo up to 100 times in textbox.

# Settings window

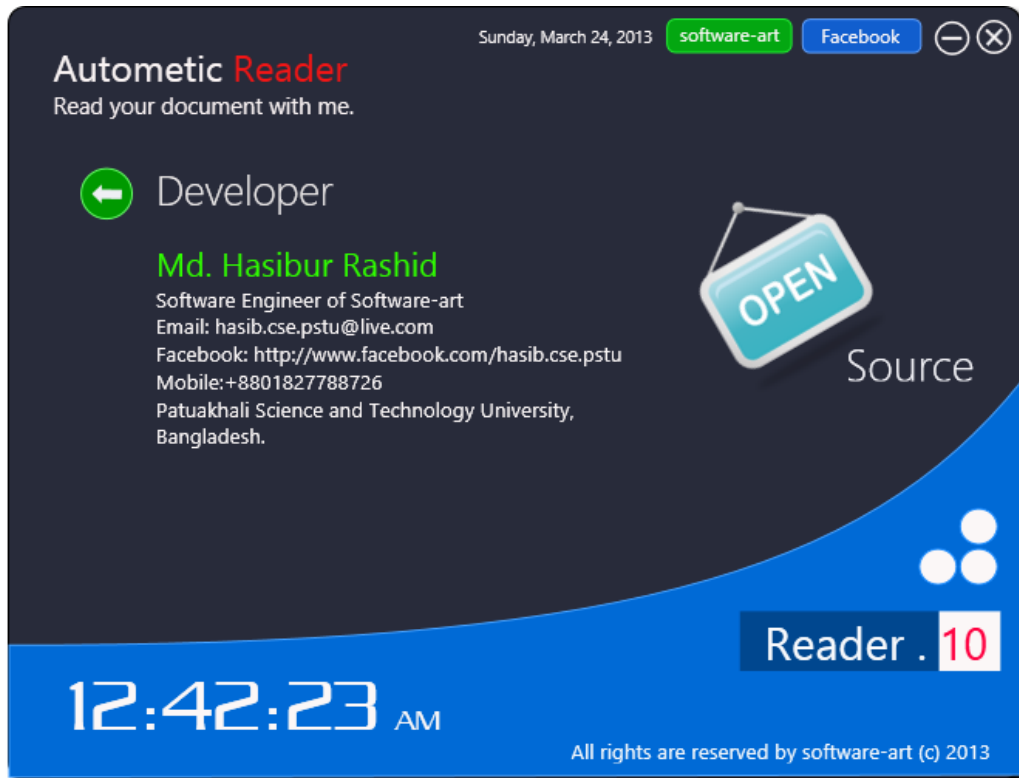

Settings contain some application settings.

**Change voice:** change your reader voice male or female.

**Volume:** change your reader volume 0 to 10.

**Rate:** change speed of reader
